Food Waste to Energy

www.earthpower.com.au

WHAT WE RECYCLE

EarthPower is designed to process five most common food waste streams for the production of energy and nutrient rich fertilizer.

- Solid Food Wastes
- Spadable Sludge Wastes
- Liquid food Wastes
- Grease Trap
- Packaged food wastes

EarthPower is always interested in evaluating new sources of food wastes from the greater Sydney region.

IMPLEMENTING SUSTAINABILITY

EarthPower's mission is to enable food waste producers to respond to the increasing regulatory and public pressure on them by providing waste disposal methods that provide reductions in greenhouse gas as compared to other commonly used disposal techniques.

THE TECHNOLOGY

The EarthPower facility uses anaerobic digestion technology to convert food wastes, into a combustible gas similar to natural gas.

The digester gas is then recovered and used as a renewable fuel source in cogeneration engines to produce green electricity and fertilizer.

At full capacity, EarthPower can power over 3,600 homes.
